I'm a focused, responsible, full of energy enthusiast web developer. I finished a 9-month intensive Web Development Bootcamp from HackYourFuture in Århus. Currently, I'm taking a full-stack web developer course at GOIT school to learn backend as well as frontend. I'm learning TypeScript and volunteering at HYF school to help people who have just started their journey in web development and improve my knowledge.
Web development appeals to me because it's constantly growing, and improving, making web developers take on new challenges all the time and creating an ideal environment for professional growth.
