Sergii Borodin, Software Engineer

I am a focused, responsible, full-of-energy, enthusiastic software engineer. I have been learning web development for more than two years. During this period, I finished two 10-month-long bootcamps, and now, I'm taking an internship at a company called NordInsight as a Full-Stack developer. In my leisure time, I enjoy watching Harvard CS50, reading "Clean Code" by Robert C. Martin, and volunteering at the HackYourFuture school to mentor individuals embarking on their programming journey. It's my way of giving back to the community and supporting others in their learning endeavours.
